PROFILE

Information Technology graduate (Faculty of Technical Sciences Čačak, 2026) who builds complete, working web applications in JavaScript and TypeScript. My projects range from a full-stack developer tool for CI pipelines to an offline-first Progressive Web App and an interactive restaurant website, each built from scratch with attention to clean code, accessibility and automated testing, and each with a live demo and public source code. Looking for a first role as a junior frontend or full-stack developer.

SKILLS

Languages	JavaScript (ES2022+), TypeScript, HTML5, CSS3, SQL, Python
Frontend	Progressive Web Apps (Service Worker, Cache API, Web App Manifest), responsive design, accessibility (WCAG 2.1), React, Tailwind CSS, i18n
Backend & data	Node.js, Fastify, REST APIs, SQL, SQLite (migrations, indexes, transactions), zod validation
Testing & tools	Vitest, Playwright, node:test, axe-core, Git, GitHub, GitHub Actions, Docker, npm, VS Code, Figma

PROJECTS

FlakeRadar – flaky test detection for CI — TypeScript · React · Fastify · SQLite

- Full-stack tool that scores every test for flakiness from its CI history (same-commit conflicts, Wilson confidence interval) and comments on pull requests to separate real regressions from known flaky tests.
- Fastify API with SQLite and transactional ingestion, a React dashboard with per-test history, and a dependency-free uploader that works with GitHub Actions and GitLab CI.
- 49 unit and API tests, CI on Node 22 and 24 with a Docker image build.

Knjigoteka – offline-first book discovery PWA — Vanilla JavaScript · Service Worker · Playwright

- Search app for the Open Library catalogue with a personal reading shelf (reading status, ratings, notes, reading statistics), JSON backup, Serbian/English UI and light/dark themes. Started as my bachelor thesis, graded 10/10.
- Service worker with three caching strategies (precache, network-first with timeout, capped cache-first) and a user-confirmed update flow; installable on desktop and mobile and fully usable offline.
- Modular ES-module architecture with no framework or build step; strict Content-Security-Policy and escaping of all external data against XSS.
- 40 unit tests and 34 end-to-end tests on desktop and mobile viewports, including automated accessibility checks and a real offline run; CI pipeline on GitHub Actions.

Live demo: vojvodixdev.github.io/knjigoteka/ · Code: github.com/vojvodixdev/knjigoteka

Last Ember – restaurant website concept — HTML · CSS · Vanilla JavaScript

- Website for a late-night burger bar with a searchable menu (filters, allergens, extras), a cart with delivery, promo codes and pickup slots, table booking and a live open/closed status.
- Scroll-driven burger animation with a static fallback for reduced motion; full English/Serbian UI; no framework, no dependencies and no build step.
